

October 01 2019

In early-2018 Carbon Tek's hydrogen carbon cleaning services were recommended to our service department as we were suffering with the exhaust after treatment problems on our CAT 980 loader.

Following a Carbon Tek 1 hour service, our 980K loader returned to normal operations and continued to perform its typical REGEN cycle. The result of using Carbon Tek service just on that one machine saved our company over \$ 6,000.00.

Carbon Tek is now part of our preventative maintenance program on all of our tier 4 engines in fleet to avoid cost repairs and replacement parts associated with these types of engines. All of these engines, including our Fleet of Mack trucks and Caterpillar equipment, are serviced annually by Carbon Tek during our holiday shutdown around Christmas.

D.S. Eakins highly recommends Carbon Tek's hydrogen carbon cleaning service. They are on time, and work around our schedule to maximize our uptime. The service is great value for money and has saved our company thousands of dollars over the past 18 months.

Respectfully,

A handwritten signature in blue ink that reads "D. Steven Eakins, Jr." in a cursive style.

D. Steven Eakins, Jr.
