Bringing CarbonTek onboard was an easy decision and an instant win for us at Team Gillman Honda Fort Bend. In our first month using the CarbonTek system we generated over \$7,500.00 in Gross and in the second month we are already over \$8,500.00 in Gross.

Our Advisors love it as they believe in the process, the customers love it because it helps keep their Honda running strong, and the technicians love it for its ease of use. Unlike other liquid-based carbon cleaning systems the CarbonTek service will not damage an O2 sensor or catalytic converter, it can't be rushed through causing a less than correct cleaning or create the smoke cloud from the exhaust that turns many customers from the other services. Not to mention that the new machines with the back-lit Hydrogen scrubber looks cool as it works, and I have had customers request the service after seeing the machine in action on another vehicle.

We have just received our second CarbonTek machine and I love to walk through the shop seeing both bubbling away. I highly recommend the CarbonTek de-carb system to any shop that is looking to increase profits and customer satisfaction.
