

To Whom It May Concern,

Monday, January 22, 2018

Good morning, it is my understanding that your company is requesting a "testimonial" of CarbonTek's services. I run a fleet of 183 concrete mixer trucks with ages ranging from 2006-2016 and 10ea. 2014 front-end loaders in Palm Beach, Broward, & Miami/Dade. We run most of the equipment 6 days a week and incur a tremendous amount of idle time due to our business. Our loaders and newer trucks all have the mandatory emission systems that require periodic "regenerations" and filter changes once they become too dirty to clean. We started off testing the cleaning on an older truck, newer truck, and a loader. The process cleans injectors, valves, turbos, and it removes soot and carbon from the pistons. We have seen the following results due to the engine carbon cleaning performed by Carbon TEK.

Improved power

Improved fuel mileage

Reduced frequency of "regenerations"

Extended life on the DPF filters

After our initial test we enlisted Richard to perform his services on our entire fleet. We have been business partners for over a year now. Richard has been able to provide those services around our schedule which means he has been working a lot of nights! I am quite pleased and would recommend his services to others.

Please feel free to contact me if you have any additional questions.

Thank you

Matthew Davitt
